Builds with the built-in markup function are now smarter. See what markup will be used in the advanced export dialog, and use it automatically. When using AutoCAD as a tool to build form and print, the improved built-in markup function means you don't have to manually include a tag in your drawing and annotations, which makes it easier to produce templates, sketches, and print designs. When you create a Drafting Control in your drawing, AutoCAD can now create a built-in tag for AutoLISP commands and any drawing-based macros that are triggered automatically by the application command. Improved Drawing Editing and Navigating: Find your way around the drawing more easily. With enhancements to the Navigate tool, dynamic guides and displays, and more, you'll find it easier to get to where you want to go. The new pan and zoom display features let you set the zooming behavior to suit your needs. For example, you can zoom into a single area of the drawing, zoom out from the entire drawing, or select a specific area to zoom. The zooming and panning capabilities are enhanced so that the faster you move the mouse, the faster AutoCAD responds. You can also set the region of the drawing that is visible in the Explorer window, the amount of detail shown in the drawing, and how many zoom levels are available, so that you can see the detail you need. Use the improved Editing Display pane, which shows the active dimension style, dimensions in edit mode, markers, and other essential parts of the current drawing. The Autofit command, used for aligning objects automatically, has also been improved. Now, a drop-down menu allows you to quickly and easily set the scale factors that AutoCAD uses to align objects. Improved 3D Navigation in AutoCAD LT: You can navigate to a specific point on a surface, even when there are layers present. In a multilevel model, you can navigate to any floor or wall. Make precise selections with improved snap capabilities. Set your preferred snap settings in the Options dialog box. You can now select a single object in a 3D viewport and use the new Select object with snap tool to make precise selections. You can also choose to snap to the closest surface or closest edge or to all snap points. Use the new 3D Move tool to move objects without
